Document: JP 2003-76394 A (Fujitsu, Ltd.)

The abovementioned document, which is cited in the international search report, discloses inventions which employ a code conversion method for converting a first code string that has been encoded by means of a first encoding technique into a second code string that has been encoded by means of a second encoding technique and then outputting said second code string, wherein the acoustic sections and the non-acoustic sections are differentiated on the basis of the frame type information and then the first code string is converted into the second code string based upon the results of said differentiation process (refer to claim 4, fig. 1 and the like).

In addition, the question of what technique to use for code conversion (i. e. the question of whether or not to temporarily decode the code string) and the question of what techniques to use for encoding and decoding during said code conversion technique in the invention that is disclosed in the abovementioned document are merely design matters that could have been configured by a person skilled in the art, as appropriate.
